

Summary of Resuspension Load Standard Proposal from GE on 12/10:

TID: Slow-down actions may be required by EPA on occasions when the average load over any 14-consecutive-day period, as measured at TID, exceeds 2%, UNLESS the average flow rate at Fort Edward during that same 14-consecutive-day period exceeds 5,000 cfs.

Waterford: Slow-down actions may be required by EPA on occasions when the average load over any 28-consecutive-day period, as measured at Waterford, exceeds 1%, UNLESS the average flow rate at Fort Edward during that same 28-consecutive-day period exceeds 5,000 cfs.
